

- 2nd & later loads avoid network delay, flakiness; your app is never broken by a bad network
- Basic data caching:
 - paths outside scope handled by classic proxy+cache
 - “network, fall back to cache” doesn’t require app logic to change

Offline Articles

- Asset cache + 1/article; cache name is article title
- In modern browsers, show “save for offline” button: add to cache in foreground
- Default offline page lists caches, thus offline articles
